Storage	Store in a dry location within a temperature range of 5°C – 30°C
Shelf life	The shelf life for an unopened container will be 12 months with no change to product properties.
Instructions for use	<p><i>All processing parameters must initially be set by a Kodak Plate Technician, Product Application Specialist, or Service Engineer</i></p> <p>KODAK 850S Plate Finisher can be used in processors as well as for manual gumming. The recommended dilution rate is 1+1 with water. Some applications might require higher dilution rates but adding more than three parts of water should be avoided. Set up the gum application roller to provide a thin and even film and avoid exit dryer temperatures higher than 50°C. Clean the finisher section and replace the plate finisher every two weeks, depending on the plate consumption. Do not exceed a time of 4 weeks. Thickening of the finisher solution due to evaporation can be compensated by addition of water.</p> <p>The Finisher section can be easily cleaned by rinsing with water. If it is contaminated with bacteria or algae, use a specific cleaning agent such as KODAK 150 K Additive</p>
