# Veilish

---

---

## Product description

Veilish is a self-adhesive semi-transparent polyester fabric for covering windows. While reducing sunlight and temperature in the room, it will provide indoor privacy without blocking the view outdoors. Veilish is easy to install, and can be cut in any shape whether by hand or a digitally controlled cutter. Being compatible with several digital print technologies it will fit any style or design.

## Physical properties

Material: Woven polyester fabric

Liner: Polyester

Adhesive: Water based acrylic

Available colours: White, Rosegrey, Black

Material thickness: 245µ

Total thickness: 350µ

## Printer compatibility

UV cure, Eco-Solvent and Latex

## Features and benefits

- Semi-transparent
- Self-adhesive
- PVC-free
- Indoor use
- UV-resistant
- Printable
- No residue after removal
- Reduces indoor heat
- Privacy
- Window decoration

## Application

It is recommended to let the material acclimatize at a stable temperature before application. Application temperature is between 15 °C and 25 °C. The window temperature must be over 10 °C to ensure proper adhesion. Before application the surface/window must be cleaned, degreased and dried thoroughly. Wet application is not recommended. Under normal conditions the material does not cause stress in windows, however thermal stress may occur in windows when printed in very dark colours and/or uneven exposure to heat and light.

Veilish can be cut with sharp scissors, knife and most digital XY flatbed cutters. For smaller and complicated graphics the use of application tape is recommended.

## Maintenance

Veilish cannot not be removed for washing or cleaning, removal will damage the adhesive properties. The window on which the material is applied cannot be cleaned with water. Cleaning can be done with a vacuum cleaner or a microfibre cloth. Stains can often be removed with a damp microfibre cloth or a solvent free cleaning solution. Solvents are not recommended since these products affect the adhesive properties.

## Storage

Veilish can be stored vertically or horizontally in its original packaging, recommended environmental conditions: between 15 °C and 27 °C, relative humidity between 30 and 60%. Once a roll has been used the remaining material must remain wound tightly on the original core to prevent tunnelling or air bubbles. Fix the product on its core with paper and adhesive tape.
